Dear Joel

The lighting system is completed and we have been using it now for a couple of months, we have nothing but good things to say about this system. The best thing right out of the box was the great savings every month on our electric bills. Other things we like about this system are the motion detectors, the brightness of each fixture and that they don't give off as much heat as our old lights. We also like the fact that we did very little for the rebate that we received from the state and that your company handled all the paperwork. Many of our customers are asking us about ways that our company is going more green and we explain to them about the lights and how much recycling we do and this has helped us win more business. The installation was great also your men caused us no interruption at all, they were well organized, very neat and left no mess behind when they were done. I tell anyone who is interested in our lights that they should convert their old lights over to this system and that they will pay for themselves in a very short time. I always recommend that they use your company for the no worry installation that we had here. If you ever would like to bring people here to see the lighting system you can just call first.

Thanks again,

James Merics
